

Home Brew Kit Instructions for:

Pumpkin Ale

(All Grain Version)

Our Pumpkin Ale is the perfect Halloween ale. With real pumpkin and spices it's a great break from the ordinary.

OG 1.062 FG 1.012 6.5% ABV 12 SRM 18 IBU's

Kit Contents and hop boil Schedule:

Fermentables

10 lbs 2 Row Malt

3/4 lb 60L Malt

3/4 lb Brown Sugar (obtained Locally) ADDED TO THE START OF 60 MIN BOIL!

4 Cans of pumpkin puree (obtained locally) ADDED TO THE FINAL 15 MIN OF BOIL!

1.5 TBSP pumpkin pie spice (obtained locally) ADDED TO THE FINAL 15 MINUTE OF BOIL!

Hops

Amount:	Variety:	Boil time:	<u>USE</u>	
1 oz	Hallertauer	60 minutes	Bittering	
1 oz	Hallertauer	5 minutes	Aroma	

Yeast

- 1. FermentisSafAle™ US-05
- 2. WhiteLabs California Ale Yeast WLP001,
- 3. Wyeast American Ale Yeast 1056

Instructions:

SANITIZE

Clean all of your brewing equipment with a cleaner such as "Brew Clean", then sterilize with a certified sterilizer such as "Star San" (Star San is a non rinse sterilizer).

Mashing GRAINS

Mash in 4.125 Gallons of water with a target of 150 degrees for 60 minutes.

Mash out with 2 gallons of 168 degree water for 10 minutes.

Sparge slowly with 170 degree water collecting 6 gallons of wort.

START BOIL

Bring your wort to a gentle, rolling boil. Now you want to follow the brewing Schedule that starts on the back page:

Brewing Schedule:

- Set Timer for 60 Minutes and keep water boiling at a gentle rolling boil.
- Add your first hops (as scheduled above for 60 minutes)
- After 30 minutes you will want to add your 1st flavor hop (if there is one in schedule)
- After 45 Minutes you will want to add second flavor hop (if there is one in schedule) Cook pumpkin pie puree in a 350 degree oven for 45 minutes. Add to the final 15 minutes of 60 minute boil with pumpkin pie seasoning.
- * Optional After 50 Minutes you should add your Whirl flow tablet (or other clarifying agent) and your yeast nutrient. These are optional and you should consult the instructions on the packages to confirm this is the proper time to add!
- After 55 minutes add your aroma hops.
- At 60 minutes you are done and you can remove the pot from the heat source.

After Brewing:

- Cool down your wort to around 70°F using a wort chiller or ice bath in your sink. The faster you cool down the wort the better. If you are using a wort chiller and your water is too warm to reach 70°F you can finish with an ice bath.
- Sanitize primary fermenter, lid, cork, air lock, aeration stone/hose, funnel, wine thief and any other items that will touch your wort!
- Top off fermenter with water to desired batch size and take an original gravity reading with your sterilized hydrometer.
- Aerate wort by shaking, rocking, splashing, or with aeration stone.
- Pitch yeast per manufactures directions.
- Fit with airlock and/or blow off tube for high gravity or dark beers.
- After seven days, rack to secondary fermenter. Secondary fermentation should take approx. 7 days. Let beer clarify under refrigeration for 2 weeks then keg or bottle as usual.

Bottling or Kegging?

You can either bottle or keg your brew when completed. If you are kegging please instructions on our website: www.kegconnection.com. If you are bottling you will need to add about 5 oz. of priming sugar to bottling bucket (or carbonating tablets directly in bottles) and bottle your beer. Bottling beer adds a couple weeks of wait time. If you force carbonate in a keg you can drink the beer

BOTTLE:

Using your siphon setup and bottling wand, fill the bottles 10 to within approximately one inch of the top of the bottle. Use a bottle capper to apply sanitized crown caps.

Kegging: See videos and written instructions on Kegconnection.com. Includes transferring, kegging and force Carbonating!
